

The Solar Solution

Renewable Energy With Financial And Environmental Paybacks

In a world where green is no longer just a color and buildings are expected to be high performance, it's difficult to distill the best financial, technical and environmental options for your facility. You need a partner who can cut through the confusion and help you effectively and economically manage your energy costs. Tremco can help.

As a market leader in sustainable roofing solutions, Tremco offers a surefire way to reconcile environmental responsibility with fiscal sensibility — the customized solar (Photovoltaic or PV) power system. We have the experience to help you select, install and maintain a state-of-the-art photovoltaic system.

Simplifying Solar with Integrated Solutions

We understand the technical, environmental and financial aspects of a solar installation and can guide you through the process from project inception to completion.

The Tremco Solution Delivers:

- | | | | |
|---|---|---|---|
| <p>1. An energy assessment to determine if a solar solution meets your energy management and sustainability goals</p> |  | <p>7. Expert project installation</p> |  |
| <p>2. An evaluation to ensure the integrity of the roof under the solar array</p> |  | <p>8. On-site management by Tremco subsidiary Weatherproofing Technologies, Inc. (WTI) to ensure your project meets budget, quality and timeline expectations</p> |  |
| <p>3. The best financial options, including applicable government incentives, Power Purchase Agreement (PPA) advice and grant location assistance</p> |  | <p>9. An ongoing maintenance program to protect your solar and roofing investment, including system inspection and essential cleaning</p> |  |
| <p>4. Expert guidance regarding LEED® certification points</p> |  | <p>10. Performance Warranty for roofing and solar system</p> |  |
| <p>5. System engineering</p> |  | <p>11. A customized online energy management tool to track your energy savings on a daily, weekly, monthly and annual basis</p> |  |
| <p>6. Material sourcing – the right PV system from the broad marketplace</p> |  | | |

Budget-Friendly Renewable Energy

You may be surprised to learn that many companies “go solar” without a big capital outlay by using a Power Purchase Agreement (PPA). Usually an option for larger solar systems, a PPA means you agree to purchase the power generated by the solar installation on your roof at a fixed price for the period of the contract, thus ensuring price stability, even as energy prices rise.

If a non-PPA solar installation is a better answer for you, numerous incentives exist to help offset costs. These include Federal Tax Credits as well as various rebates and incentives at federal, state and local levels. Your Tremco team can help you discover what’s available in your area.

Flexible System Solutions

Photovoltaic systems are easily adaptable to existing or new structures. They can be roof-mounted, roof-integrated, ground-mounted or customized wall and shade structures. Thin film solar panels can even be attached without penetrating the roof, for easy removal if necessary. Photovoltaic modules require minimal maintenance beyond routine cleaning.

From roof-mounted Crystalline Panels to roof-integrated Thin Film Applications, PV systems are used on both small and large roof areas, depending on your energy objectives.

Tremco ManagedAssets™

The roof under your photovoltaic system can be additionally ensured through Tremco ManagedAssets (TMA), the company’s unique performance guarantee program that provides planned maintenance and housekeeping and assumes risk of the roofing system for up to 20 years. Through TMA, we can also guarantee the functionality of the PV system for a fixed term at a fixed price by performing cleaning and electrical maintenance on a defined schedule.

Savings Today For A Better Tomorrow

Smart energy choices begin with reliable, affordable and renewable solar power. Let Tremco show you how your roof’s prime location for soaking up the sun just may be your ticket to a healthier bottom line today and a healthier planet tomorrow.
